Wellington Regional Medical Center now offers 3 Dimensional Mammography and other advanced technology in their Breast Disease Program

 Wellington Regional Medical Center is excited to announce that we have recently launched our new comprehensive breast program in our Women's Diagnostic Center. As part of our commitment to offering women in Palm Beach County the latest and most sophisticated diagnostic options for breast disease,

we have acquired advanced  technology which includes 3 Dimensional Mammography, an advanced breast screening technology for early detection which delivers exceptional images regardless of breast size or density as well as the SaviScout Surgical Guidance System, which provides a more reliable and comfortable means of localizing breast masses discovered on mammograms. The Savi Scout is a wire-free surgical guidance system designed to refine tumor localization for lumpectomy and excisional biopsy. We also now offer Intrabeam Intraoperative Radiation Therapy (IORT) for treatment of some breast cancers which allows the entire radiation therapy to be completed at the time of surgery as a 20 to 30 minute treatment". 

South Florida Hospital News and Healthcare Report's number one goal is top quality healthcare journalism written and edited for the region's most successful, powerful healthcare business executives and professionals.
